

Essex X-ray

Essex X-ray designs and manufactures quality high voltage products for medical, scientific, industrial and commercial industries around the world. It is a market-leading specialist in cable connections and related interconnected products that can handle up to 320kV.

www.bcmz.co.uk

Its products are used in a wide range of High Voltage applications including pulsed power, particle physics and electron beam welding and, naturally enough, X-ray imaging and inspection equipment for medical, automotive and marine industries.

Exporting products to 27 countries around the world, the business delivers high quality, high specification products to specialised, demanding and regulated markets.

Essex X-ray

Connecting components

BCMZ has worked with Essex X-ray since 2010, manufacturing machined components for its High Voltage interconnecting products.

Orders have included Faraday cup and bell housings and a range of connecting components in a number of high quality anodised finishes.

The quality of work is paramount to Essex X-Ray and BCMZ understands the importance of delivering an extremely high standard of quality and finish in order to eliminate the risk of electrical stress failures occurring at a high voltage.

Insight and experience

BCMZ has contributed knowledge and skills that have made a valuable difference to Essex X-ray:

Dean McGivern, CEO, Essex X-Ray, says, "BCMZ has been superb in providing a professional service. Kevin Davis and his team have been proactive and forward thinking.

"He gets involved in our development and product design discussions and provides manufacturing advice so that BCMZ reduces our lead times and minimises material waste."

Competitive supply chain

Essex X-Ray operates a selected and competitive supply chain in order that it can strengthen its ability to respond quickly to market demand.

This means that BCMZ is regularly tested on quality, price and reliability.

As Dean McGivern, says "We operate in a volatile market and look for a precision engineering business with the ability to react quickly and help us reduce lead times."

"BCMZ is very reliable on delivery and overrun production in order that they can hold call-off stock for us. They have bent over backwards to accommodate us. I cannot fault them."
